Global Medical Technologies Announces Position on Medical Breakthrough

Wednesday September 22, 8:00 am ET

TEMPE, Ariz. -- Century Pacific Financial Corp. (OTC Bulletin Board: CYPC - News) announced today that the company's wholly owned subsidiary, Global Medical Technologies, Inc., and Cryptic Afflictions, LLC, have formed Limina Biotechnologies, Inc. in the State of Nevada.

Under terms of the agreement, Dr. Steven J. Robbins, Acting Chief Executive Officer of Cryptic Afflictions, LLC, and David Hadley, President of Century Pacific Financial Corp., anticipate merging both companies, Cryptic Afflictions, LLC, and Global Medical Technologies, Inc. into Limina Biotechnologies, Inc.

"We expect the shareholders of Century Pacific to significantly benefit from our ownership interest in Limina Biotechnologies, Inc.," commented David Hadley.

Cryptic Afflictions, LLC has extensive U.S. and international patents pending and owns the intellectual property rights to a major and, heretofore, unrecognized human neuropathogen, an RNA virus designated-Cryptovirus. Substantial clinical and molecular evidence indicates that this virus is involved in the development of major neurological disorders including Multiple Sclerosis (MS) and Idiopathic Epilepsy (IE); epilepsy of unknown cause.

This evidence includes (1) the presence of Cryptovirus-specific antibodies in the serum and cerebrospinal fluid of patients suffering from these disorders, (2) the ability of the virus to cause virtually identical disease in experimentally-infected animals, and (3) nucleotide sequence data that indicates that the virus is pandemic and represents a single virus "species"-more akin to measles virus than hypervariable viruses like HIV.

"Further clinical validation studies using Cryptovirus-specific RT-PCR assays have been

initiated to confirm the presence of the virus within central nervous system lesions of patients diagnosed with such disorders," stated Dr. Robbins.
